

How to Choose the Right Size for Bubble Packaging

The larger the product, the larger the bubble thickness.

3/16" bubble packaging: This size bubble is used for wrapping small, light-weight products for light cushioning protection during transit.

5/16" bubble packaging: This size bubble is used for medium size products providing void fill, shock absorption, and cushioning protection during transit.

1/2" bubble packaging: This size bubble is best for larger items that need void fill and cushioning protection during transit.
